

Specs has over thirty years of experience in purchasing, processing and handling chemical compounds for the Life Science industry. We now offer our expertise as a third party, outsourced service.

To acquire compounds needed for your research activities, sourcing from twenty or more different vendors is not uncommon. The administration and handling involved to complete such an operation can be overwhelming. In fact, many researchers or purchasing agents will sacrifice interesting compounds to minimize the number of vendors from which compounds are sourced. Specs can act as a third-party purchaser and order compounds from the indicated vendors on your behalf and under your pricing conditions. With only one contact, the ordering process is clear and much easier to manage. For this service, we only charge the actual compound cost from the original vendor plus a small management fee for our sourcing service.

Specs will take care of the complete process, ordering, reformatting and shipping the compounds to

research facilities around the world with one consolidated database. The entire procedure can encompass:

- contact and ordering
- order tracking and administration
- weight check
- quality control
- reformatting into standardized vials
- plating (mother- and daughter plates)
- database consolidation
- one single shipment to all your research facilities around the world

We will contact all desired vendors, order the compounds you need, monitor all incoming shipments and take care of the administrative hassle involved. If compounds appear to be unavailable from one vendor, we can source them from other suppliers or otherwise take care of crediting for undelivered compounds. We will crosscheck the structural integrity of all incoming compounds according to your guidelines, the correct weight and we can perform a quality check on the incoming samples by means >>>

>>> of LCMS and/or $^1\text{H-NMR}$. All samples will be reformatted into your standardized vials and can be plated into 96- or 384-well or 1536-well plates or tubes, all properly barcoded. All details concerning tare weights and contents are appropriately registered into one single database.

In the end, one organized delivery is made, one shipment to all your research facilities, one database and one invoice. Specs has a proven track record for this service and references are available upon request. Ordering compounds has never been so easy.
